Aquatex

- Reduces the risk of accidental falls into the pool
- Retains leaves and debris

- Very good resistance to tensile stress loading
- Great dimensional stability
- Well suited to larger pools and for the protection of winter covers

AQUATEX covers provide excellent protection against accidental falls into a pool: this strong cover protects and safeguards your pool providing peace of mind all winter through.

AQUATEX covers are beautiful, exceptionally hard wearing and very easy to maintain.

AQUATEX is a very strong light-weight mesh cover made of woven, reinforced PVC coated polyester. A wide reinforcing band around the edge protects the cover against the wear and tear that can be caused by abrasion.

The underside of the reinforcing band that lies against the coping is beige coloured to avoid staining that can be caused by abrasion.

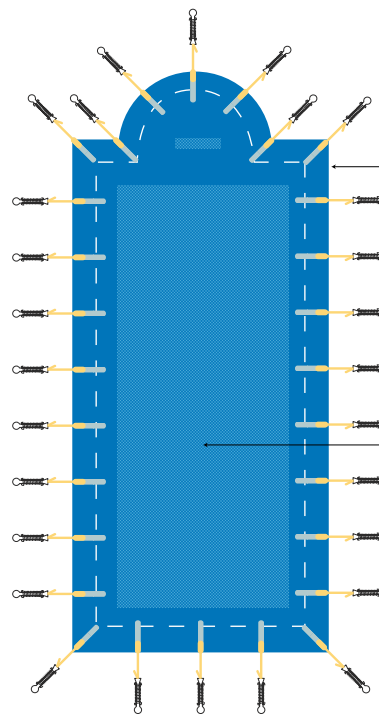

AQUATEX's PVC coating is UV-proof and is not deteriorated by chemical products.

The classic AQUATEX cover is fastened to the ground by means of individual straps and dynamometric springs. Every component of this finish and fastening system is made of materials chosen for their excellent quality and efficiency. The straps are welded to the underside of the cover and are reinforced by an additional strap piece welded over the top. The underside of the straps is beige to prevent staining of the coping. Each strap is fastened to a stainless steel spring that is in turn attached to an anchor bushing, stainless steel or pop-up, driven into the ground. Beige PVC sleeves are provided, these are slid over the springs to provide additional protection

In addition to its remarkable strength, this fastening system ensures that tension is distributed evenly over the cover's surface so that it is held flat against the ground.

Each AQUATEX cover comes with its own storage bag.

Available colours:

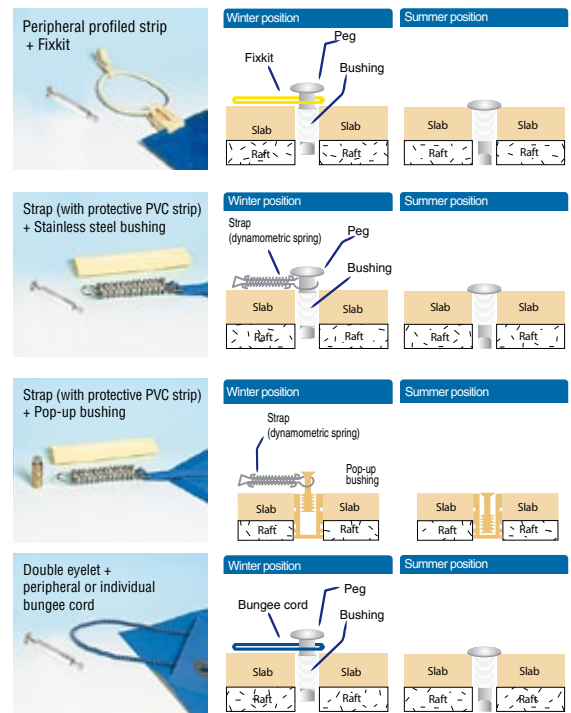

Overlaps the pool water surface around the entire periphery;
Strap finish - 40 cm overlap
Peripheral profiled strip and double eyelet - 35 cm overlap

Fasteners spaced at 1 m intervals (+/- 10%)

Strap
Material: 1000 g/m²
Failure load: 400 DaN/5cm

Central mesh fabric
blue/beige, green/beige or grey/beige
Material: 360 g/m²
Failure load: 150 DaN/5cm

Peripheral reinforcing band in contact with the coping (width 54.5 cm).
Material: 650 g/m² blue, almond green or grey surface and beige underside.
Failure load: 250 DaN/5cm
