Pool & Spa Equipment

# Epervier

- Protects the waterproofing above the water level
- Inhibits photosynthesis
- Retains leaves and debris
- Secures pools
- Very good resistance to tensile stress loading
- Great dimensional stability
- Light and easy to install
- Suitable for large pools
- Ideal for pre-drilled decks

**EPERVIER, a simple and effective winter cover that secures and protects your pool. As well as preventing people or objects from falling into your pool, EPERVIER covers protect exposed areas of the waterproofing from damage by sunlight and slow the growth of algae by inhibiting photosynthesis. These covers can be fitted to existing anchoring systems.**

EPERVIER combines strength and light weight in an attractive cover that meets the stringent requirements stipulated in the French standard NF P 90-308 (depending on the type of finish/fastening system selected). Purpose designed for easy installation, removal and cleaning, its sober and discreet appearance ensures seamless integration into your pool surroundings.

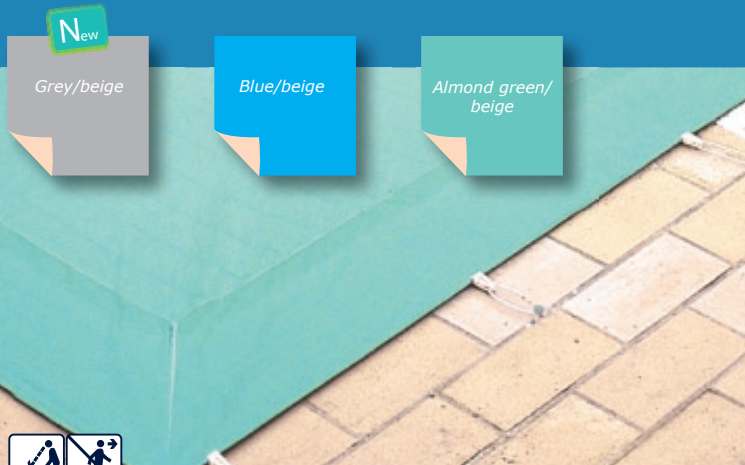

EPERVIER is an opaque cover made of prestressed, woven, PVC coated, reinforced polyester. The is edged with a wide reinforced strip to protect it against abrasion caused by contact with the coping. The underside of the reinforcing band that lies against the coping is beige coloured to avoid staining.

The fabric, made exclusively for our factories, features microperforations distributed over its entire surface, thus EPERVIER covers allow rain water to filter through but are impermeable to light. The cover's design ensures that it lies perfectly flat over any pool, even those featuring steps and free-form pools.

Its PVC coating is treated to withstand the effects of UV light and aggression from chlorinated products. The classic EPERVIER cover is edged with a peripheral profiled strip welded into the hem of the cover that is attached with Fixkits to bushings driven into the ground. Other finishes and fastening systems are available.

Each EPERVIER cover comes with its own storage bag.
